Lindsey Yu, CIS 195 Final Project Proposal
Personal Recipe Storing App

Project Description: The app will store saved recipes from either online sources or user input. The recipes will be placed under categories that are set by the user, like "Dinner," "Dessert," "Thanksgiving," etc. Under each category, there will be a list of saved recipes that each have a corresponding page. The page will store the image(s) of the dish, instructions, and any notes the user wants to add.

Frameworks / Packages: pod frameworks also plan to use an API for recipes (still looking for a good one)

Database: The database (probably Firestore) will hold the recipe info (Title, Description, Photo, Instructions, Notes).
